Panlin Li

High-Dimensional Statistical Learning · Functional Data Analysis

panlinryan@gmail.com (+86) 134-6841-2787 https://2004lryan.github.io/

Education

Xinjiang Agricultural University · B.S. in Mathematics & Applied Mathematics Sep. 2023 – Jul. 2027

GPA 3.88/5.0 · **Coursework Top 1.5%** · **University-wide Rank 1st**

TOEFL 110 · Advisor: Prof. Hua Huang

12	9	1	15	13	4
Papers	First-author	In submission (SCI Q1)	Projects (2 nat'l)	Awards (5 nat'l)	Software copyrights

Honors & affiliation: National Scholarship; Outstanding Volunteer (×9) & Outstanding Team, CYL Central Committee; Outstanding Student Pacesetter, Outstanding Student and Innovation & Entrepreneurship Star (3 consecutive years each), Science & Innovation Pioneer Scholarship, Outstanding Class Collective (as class monitor) — XJAU; Member, China Society for Industrial and Applied Mathematics.

Research & Projects

Xinjiang NSF General Program · Participant — Spatial–Spectral Fusion for Functional Modeling — 2026 – Present

- **Situation** Hyperspectral imaging carries image and spectrum together, yet conventional pipelines process the two separately and concatenate them — breaking spatial structure while still facing band redundancy and the curse of dimensionality.
- **Action** I own image acquisition and preprocessing (9-member team, 10 months a year): ROI extraction, spectral correction, outlier removal and spline interpolation onto a common wavelength grid; then basis expansion turning discrete spectra into functional curves, with a basis-family and basis-number selection strategy settled by comparison.
- **Result** The pipeline now carries both representation routes — functional PCA and interval generalized PLS; the proposal further **seeded 3 student innovation projects** (1 regional, 2 university-level), whose sub-topics I lead-authored.

Provincial Project · Ongoing · PI — Shenji Miansuan — Sky-Ground Integrated Digital Cotton Field — 2026 – Present

- **Situation** Pest scouting, water-and-fertiliser decisions and residual-film management on large cotton farms still rely on manual inspection and experience, with scattered sensing hardware and no digital layer turning data into decisions.
- **Action** **Project PI**, leading a four-person team and an industry partner; built a sky-ground monitoring network from ESP32 nine-axis environmental sensing and drone multispectral imaging, an improved YOLOv5 pest recogniser and a water–nitrogen–carbon–film coupled irrigation and fertilisation model, with edge-cloud collaboration and federated learning keeping each farm's data on site.
- **Result** Entered the industry track (growth group) of the 12th Xinjiang Innovation & Entrepreneurship Competition with a partner company; the due-diligence review **recommended advancement**.

National Project · Completed · PI — Small-Sample Time-Series Forecasting for Energy Economics — 2024 – 2025

- **Situation** Energy-consumption series offer only a handful of annual points, where conventional forecasters overfit; grey models are viable here, but whether an integer accumulation order is optimal had never been tested.
- **Action** Lead-authored the design; re-engineered the kernel-regularized non-homogeneous grey model with conformable fractional accumulation (CFAKRNGM) and searched the continuous order by the Hiking Optimization Algorithm against a KRNGM baseline.
- **Result** MAPE fell from 0.0557 to 0.0522, but the optimum landed at $\alpha = 0.9998 / 0.9995$ — back at integer order, so **the fractional mechanism was never activated by the data**; the negative result is reported in full (co-first author).

Other 12 student innovation projects: National (1) — apple origin traceability (core member); **Provincial (4)** — Yunwen Jiangrong Hub (PI · Excellent), Apple SSC via FDA + image fusion (Excellent), Tongxi Zhixing visually-impaired navigation, hyperspectral multi-task detection; **University (7)** — nonlinear wave solutions of high-dimensional PDEs (PI · Excellent), cross-device spectral transfer for online rapid detection (PI), Zhitong smart cane (Excellent), Tianshan Pastoral Song (Excellent), non-traveling-wave solutions and localized excitations, AI pest & disease diagnosis, fruit & vegetable storage-quality forecasting; one of them recognized by the AI Ecosystem Group, Huawei Hangzhou Research Institute.

Competitions & Awards

China International College Students' Innovation Competition (2024)	**National · Bronze** · Participant
11th National Undergraduate Statistical Modeling Contest	**National · Third Prize** · Team Lead
"Chia Tai Cup" National Market Survey & Analysis Contest (15th & 16th)	**National · Third Prize × 2** · Team Lead
"DataBee Cup" National Interview Survey Contest	**National · Third Prize** · Team Lead
China International College Students' Innovation Competition, Xinjiang Division (2025)	**Provincial · Bronze** · Team Lead
National Mathematical Modeling Contest, Xinjiang Division (2024)	**Provincial · Second Prize** · Team Lead
10th National Undergraduate Statistical Modeling Contest, Xinjiang Division	**Provincial · Second Prize** · Team Lead
14th China Innovation & Entrepreneurship Competition, Xinjiang Division	**Provincial · Third Prize** · Team Lead
Xinjiang Division Information Literacy Contest (2024)	**Provincial · Merit Award** · Team Lead

Student Experience

Class Monitor, Mathematics 2302, School of Mathematics & Physics, Xinjiang Agricultural University — Sep. 2023 – Jul. 2027
Class Monitor, 19th Youth Marxist Training Program, Xinjiang Agricultural University — May 2025 – May 2026
Head, Volunteer Association, School of Mathematics & Physics — Sep. 2024 – Nov. 2025

- Founded the 20-member "Shield of the Future" volunteer team; took part in 11 public-welfare programs organized by the CYL Central Committee and the China Young Volunteers Association; the work was covered by *China Daily*, *People's Daily* and other outlets.
